Re: MCB Camp Lejeune, Site 22, Hadnot Point Industrial Area
Tank Farm

Dear Ms. Glenn:

During a Remedial Project Managers' meeting at MCB Camp Lejeune 19 and 20 February 1992, the subject site was discussed. The Navy stated that all previous sampling in and around Site 22 indicates that petroleum-related products from tanks at this site are the only apparent source of contamination. These tanks contained jet fuel and therefore are exempt from CERCLA under the petroleum exclusion.

As such, at the above meeting, EPA Region IV, NCDEHNR, and Navy/Marine Corps representatives agreed that if petroleum-related products are the only apparent sources of contamination at Site 22, further remediation work would appropriately be performed under the cognizance of the UST programs of the Navy/Marine Corps and the State of North Carolina.

Accordingly, we request your written confirmation of this matter.

If you have any questions concerning this subject, please contact Mr. Byron Brant at (804) 445-2931.

Sincerely,

P. A. RAKOWSKI, P.E.

Head
